

Medical-Objects

Who we are

What we do

Where we are

How we do it

Medical-Objects

- Medical-Objects is now in its 10th year.
- Used by GPs, Specialists, Allied Health, Radiology & Pathology companies, Hospitals and Area Health.
- Medical-Objects is now used by over 14,000 health care providers Australia wide.
- Our secure messaging is not email, we are a point to point secure system. That means, if you send a letter or referral to a provider in the directory it goes directly to their practice and is not stored anywhere else unlike email systems. Our Messaging is Fast! and Real-Time

Where is it used in NSW

- GP Access
- Murrumbidgee GPN
- Mid North Coast NSW DGP
- Nepean DGP
- Central Coast
- Hunter Rural DGP
- Illawarra DGP
- New England DGP
- North West Slopes
- Northern Rivers GPN
- North Slopes GPN
- Southern GPN
- Tweed Valley
- Wentwest

Medical-Objects Features

These features include:

- We use trusted Australian Standards.
- Secure and authenticated transport using Public Key Encryption.
- HL7 v2.3.1 (Health Level 7) – an ANSI standard for transmission of clinical data.
- Guaranteed delivery through HL7 Acknowledgments.
- Integration with most popular practice software.
- Automatic Updates for Software.
- Transformation of data into AHML compliant HL7 Messages.

Download Client

Medical-Objects Download Client has the ability to split results into several queues and convert these results to PIT or Images.

It uses standard HL7 ACKs to ensure guaranteed delivery.

If software doesn't import HL7 or PIT, documents can be downloaded to a folder as PDF.

Medical-Objects Download Client is not an email client.

All messages are protected with world class security solutions like PGP encryption, user authentication, and network security.

Referral Client

- The Medical-Objects Referral Client is a lightweight software program that can capture General Practitioner referrals from your Practice Management Software and send it to other connected Medical-Objects users.
- Choose to send with or without PKI.
- In two clicks you can see when and where your referrals were sent via a Delivery Report. You can even see when they were imported to the practice software at the receiving practice.

How can secure messaging benefit you?

- Reduce the time you wait for results to be delivered.
- Electronically receive results directly into your practice software.
- No more poorly printed or faxed information.
- Simple and fast communication between health providers.
- Monitor results you have sent or received via a delivery report to guarantee delivery.
- Securely send and receive correspondence using Public Key encryption.
- Save money – cost savings in stationary, postage, faxing and human resources.

Specialists

- Most commonly use the Word Plug in to send.
- Same download client is used by all.
- Works with Genie on MAC or Windows, Blue Chip, Zedmed, Medtech32, Total Care, VIP, Practix, Stat Health , Medilink, Audit4.
- The 'CVS tool' is for when you have an existing database system that produces CSV files. We can then convert them to messages that can be delivered. Currently the software used to automatically generate the SA Cervical notifications by Cervix Screen SA.
